

# CASE STUDY

## PROREND

### AT MOOR PARK

A new development of eco-houses

This development of 18 newly built, energy-efficient properties stands out with the great finish of ProRend Colour.

A premium through-colour monocouche lends sharp lines and contemporary colours to the natural materials of slate, stone and oak.

Each home in this Devon village development is individual in design and uses the ProRend palette of Ocean, Bamboo and White to visually tie the development together.

This through-colour render has an attractive 2mm fine-scraped finish with a refined mica sparkle. It can be applied in just one day in good weather conditions.

Homeowners at Moor Park will benefit from low-maintenance exteriors that do not need painting and can be cleaned easily with power-washing.

ProRend Colour is a premium quality silicone monocouche render, that can be applied by hand or machine sprayed.

Applied with glass-fibre ProMesh Grade 5 to give incredible strength, and ProBead trims for clean lines, the quality finish really shines through.

With 16 colours to choose from, use as the sole finish or combine with other materials as the developers have here with great effect. ProRend Colour ticks all the boxes for a quality new build project.
